DETAILED ACTION

Drawings

1. The drawing is objected because:

Figure 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 6 and 11 are objected to because of the following informalities:

Regarding claims 6 and 11, the phrase "substantially equal to" should be changed to --equal to--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the

reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 102(e) as being unpatentable by Hassoun (US 6,487,648 B1).

a) Regarding claim 1, as shown in Figure 4, Hassoun discloses a digital clock manager having a reference input terminal (REF_CLK), a skew input terminal (CLK_FB), an output terminal (O_CLK), and a frequency adjusted output terminal (CLK_J), the digital clock manager comprising:

a delay lock loop (DLL) (304B) coupled to the reference input terminal, the skew input terminal, and the output terminal; and

a digital frequency synthesizer (304A), coupled to the delay lock loop and the frequency adjusted output terminal.

b) Regarding claim 2, the delay lock loop is configured to generate an output clock signal on the output terminal, which synchronizes a reference clock signal on the reference input terminal with a skewed clock signal on the skew input terminal. (Col 10, L5-13; Fig. 5)

d) Regarding claim 4, the delay lock loop (304B in Fig. 4) comprises a DLL output circuit (510 in Fig 5) having a DLL output delay (D-CLK in Fig. 5).

- e) Regarding claim 5, the digital frequency synthesizer (304A in Fig. 4) comprises a DFS output circuit (510 in Fig 5) having a DFS output delay (D-CLK in Fig. 5).

Allowable Subject Matter

5. Claims 3, 6-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 19-22 are allowed.

7. The following is an examiner's statement of reasons for allowance:

None of the prior art teaches or discloses the subject matter of an output clock signal has being synchronized with a frequency adjusted clock signal during a concurrence. Claims 20-22 are allowable because they are dependent upon claim 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
